

COVID ALTERNATIVE PROTOCOL (BUDESONIDE)

The following information is intended to offer treatment options to COVID. This is not about whether a person has or has not received the vaccine. Everyone should be led by what they believe the Lord is telling them to do. However, some vaccinated people have also contracted COVID and are seeking other options for treatment.

The suggestions herein were given on The Daystar Christian TV Network recently. Dr. Richard Bartlett on 9-14-2021 shares about the new treatment protocol being used to treat COVID and explains the impact it is having. If you want to watch this program online, click this link: <https://player.lightcast.com/zMTO5IDO>. This is an edited transcript.

Dr. Bartlett's Protocol

1. **Budesonide** - A steroid that decreases inflammation in the lungs. It has been out for 25 years and is FDA approved. For the budesonide, he recommends getting a portable nebulizer machine for \$30-\$40 where you place a pre-measured amount of the medicine in the nebulizer, push the button on, and do their breathing treatments once a day. It is readily available at a pharmacy by prescription.
2. **Clarithromycin** - An antibiotic that protects people from a bacterial pneumonia, both a typical walking pneumonia and strep-pneumonia.
3. **Aspirin** - A low-dose 81mg aspirin, a baby aspirin, is enough to protect the blood from clotting. One poison released from the lung tissues is called thromboxane that causes the increased clotting, heart attack, strokes, and clots in the lungs that are happening with some COVID-19 patients.
4. **Zinc** also helps with viruses and can be purchased over the counter. (It helps to boost your immune system).
5. **Nose Spray** - Budesonide comes in an over-the-counter form as a nose spray called Rhinocort also, which decreases the amount of receptors for the virus to latch on to. Walgreens has their own generic brand of Budesonide. You are doing this to kill some of the viral load so your system has less virus to fight.
6. **Mouthwash** - Another recommendation is mouthwash such as Listerine to help kill some of the viral load. Some mouthwash kills 99.9% of germs such as bacteria and fungus, and it can slow the spread of viruses. This is the kind you want to get. Gargle only twice a day. For more information, click the following link to read the article, *"To Disrupt the COVID-19 Virus, Gargle and Rinse!"* <https://www.healthleadersmedia.com/covid-19/disrupt-covid-19-virus-gargle-and-rinse>

You must make a demand and stand for what you need while in the hospitals. You cannot be quiet. You must speak up for your loved ones and demand what you want or need.

Dr. Bartlett shares a testimonial of a man who was dying and only had hours to live. He took Dr. Bartlett's protocol and immediately began to overcome COVID.

He states that ventilators can cause damage to the lungs because they pound the lungs with pressure with every breath when people are inflamed with COVID.

If you or a family member test positive or experience COVID symptoms, visit the website Budesonideworks.com. It offers the protocol listed herein that you can show to your family doctor. If the doctor will not do it, then there is a provider tab on the website that offers medical professionals who will do telemedicine. You will talk to them on the phone, and they can send the medications to your pharmacy. You do not have to know everything about medicine. You simply need to get in touch with one of them. Visit www.budesonideworks.com. Scroll to Provider, then on that page look for the provider for Tennessee.

If you don't have symptoms, then use mouthwash that kills 99.9% of germs to kill viruses on contact. Your body will have less virus to fight. If you have symptoms, use it more frequently. If you don't have symptoms, use it at least once a day. Again, gargle only with a mouthwash that kills 99.9% of germs.

Again, steroid nose spray called Budesonide comes in an over-the-counter nose spray. Research shows that one puff in both nostrils each day will decrease the receptors you have for the virus to latch onto.

There is much fear going on today. This is dangerous because fear can hurt our immune system.

You must fight this battle not only in the physical, as outlined here, but also in the spiritual. Please speak the healing confessions and Psalm 91 NLT confession once or twice every day. Also attached are scriptures for overcoming fear to help strengthen your mind and anchor your soul.

Disclaimer: *This is not to encourage you to not take the vaccine. WOOCMC only provides this information to offer you other possible COVID treatments, especially if you are concerned about the vaccine, or if you have taken the vaccine and you have still contracted COVID. We are not telling you to choose this. Please use at your own discretion. Check with your doctor. Most importantly, be led by the Lord. To see more programming about the virus and vaccine, please visit covid.daystar.com and vaccines.daystar.com.*

Why will most doctors possibly no longer promote or permit alternative prescriptions for COVID 19? Medical Certifying Boards have threatened to suspend the licenses of any physician who does not promote the vaccine. Please read the information in this link: [Joint Statement on Dissemination of Misinformation | ABIM.org](#)
