

THE POSITIVE EFFECTS OF IVERMECTIN

The following edited transcript information comes from the Daystar Christian Network program. Dr. Pierre Kory speaks about the positive effects of Ivermectin to fight against COVID-19. To view the program, please visit this link: <https://player.lightcast.com/zQTO4MjN>

YouTube has censored Dr. Kory's videos. The question is, "Why?" They have decided that only one medical viewpoint is allowed by the CDC, and that is hospitals and ventilators. "Government-sanctioned censorship of ideas and speech should frighten us all" (Wall Street Journal).

Ivermectin has been shown to work very well with viruses, and it is extremely effective against COVID. It was originally discovered to be effective against parasites, and it has eradicated parasitic infections around the world, such as in India and Africa.

They are now discovering antiviral properties that block the entry and replication of the virus, and it is proving to be a very potent early treatment as well as a preventative measure against COVID.

As a result, the statistics show significantly large reductions in the transmission. If you take Ivermectin, your chances of getting COVID are in the single digits to zero, depending on how often you take it. If you take it early, then your chances of hospitalization are drastically decreased. The time until you feel better is generally cut in half. The time until the virus clears up completely is also cut in half.

Even in late-phased patients, hospitalized already sick patients where the virus isn't prevalent, it is mostly the inflammatory reaction. We are seeing drastic reductions in mortality. This means improved survival with use in late phase. So it is hitting every phase in every facet. You can use it before COVID, early if you contract COVID, or late after you contract COVID. They even recommend taking Ivermectin on an ongoing basis to protect you, maybe once every two weeks after an initial dose.

Visit Dr. Kory's website at www.flccc.net to get updates if there are ever any changes in its use. It has an unparalleled safety profile and is very low-cost. It is also on the World Health Organization's (WHO) list of essential medications. It also won the Nobel Prize. More data is revealing that Ivermectin is the medication to be used for COVID.

Ivermectin stops COVID from being a death sentence by interrupting and preventing deterioration. It is a potent, antiviral medication. You can use it late, but Dr. Kory suggests that it is used on first symptoms, first day. Earlier is already better to prevent hospitalization.

The elderly who are the highest at risk of succumbing are our nursing home patient's assisted care living facilities. Nursing home directors have talked about dramatic reductions or changes in outbreaks in their nursing homes, fewer hospitalizations with mortality rates dropping.

Should it be used if you have already been vaccinated? It does not show that you shouldn't take it. If the vaccines prove to have long-lasting immunity, then you may not need Ivermectin. If they don't, then Ivermectin can act as a safety net. It is very affordable.

To get the doctor to prescribe it, go to them and share the data from Dr. Kory's website at FLCCC.net and give them the link. It is quite long, and most doctors will not take the time to read it. Dr. Kory provides a one-page summary of the evidence called ONE PAGE SUMMARY OF THE CLINICAL TRIALS EVIDENCE FOR IVERMECTIN IN COVID-19: <https://covid19criticalcare.com/wp-content/uploads/2020/12/One-Page-Summary-of-the-Clinical-Trials-Evidence-for-Ivermectin-in-COVID-19.pdf>

For the many doctors who may not want to prescribe it, go to Frequently Asked Questions on Ivermectin on the website stated earlier: www.flccc.net. The second question to ask is, "What do I do if my doctor will not prescribe Ivermectin to me?" He gives a directory of doctors in different states as well as Telehealth providers. It may cost \$50-\$60 for the telehealth conference call visit.

On his website, he offers lay people a preventative and an early protocol called I-Mask plus of what you should take at each phase of COVID.

Disclaimer: *WOOMC's role is to only make information available to you to help you make an informed decision by sharing other available COVID treatment options. This is not to encourage you to not take the vaccine. This is a written transcript of the TV program listed as a link at the top of this article. Please visit your doctor to receive his advice. More importantly, seek the Lord. If you feel you need the vaccine, then by all means take it. However, many vaccinated people have still contracted COVID. Use at your own discretion.*

Why will most doctors possibly no longer promote or permit alternative prescriptions for COVID 19? Medical Certifying Boards have threatened to suspend the licenses of any physician who does not promote the vaccine. Please read the information in this link: [Joint Statement on Dissemination of Misinformation | ABIM.org](#)
